2.1: Eisenhower Matrix and MVP

CS19300 Final Project: College Budgeting Web App

	Urgent	Not Urgent
Important	**Do (Your MVP)** • Log an expense fast: amount + tap a category, date fills in automatically • Log money coming in (e.g. "got $300 from parents") • College categories in groups: Food, Getting Around, School, Personal, Fun, Essentials • "Where did it go" breakdown: spending by category since your last deposit • Transactions page: see, edit, and delete expenses • Save data in the browser (localStorage)	**Schedule (For V2.0+)** • Safe to Spend today + pace warnings • Auto-category memory (type "Chipotle" once, it's Dining Out after that) • Tags like #with-friends • Type-to-log: "12.50 chipotle" becomes an expense • Compare months / spending history • Backend + login to sync phone and laptop • AI-powered logging
Not Important	**Delegate (Use a library)** • Pie and bar charts of where money went: Chart.js • Date math (start of month, "since Oct 3"): date-fns • Category icons: Lucide • Export transactions to CSV: PapaParse	**Delete (Cut it)** • Need vs want cost splitting • Store-based categories (Target, Walmart, Amazon) • Connecting to a bank account • Receipt photo scanning • Streaks and gamification badges • Investment / trading tracking
